Eye on the Skye platform

Product Presentation

INTUS

smartcities

Our Mission

To become a global leader in smart city technology by improving safety, efficiency, and digital intelligence in the everyday lives of people and communities around the world.”

Boss - Pipeline Integrity System.

With Eye on the Skye

- BOSS is an integrated suite of software for the purpose of optimizing the operations and management of pipeline with integral eye on the Skye platform
- BOSS helps to prevent & detect theft of oil and gas from pipelines with a flying respond system that can sniff and confirm leakage, provide areal view day and night
- Integrated control and command center for air, ground and underground
- Boss correlate pipeline flow and consumption to identify leakage or theft and can dispatch the Eye in the Skye system to confirm.
- BOSS provides pipeline asset management, design, maintenance, operations, safety, risk management and decision support system.
- BOSS enhances operational efficiency by increasing the process visibility.
- BOSS System optimization is achieved by comprehensive correlational analytics.

Pipeline Integrity Management

- Turn-key solution to infrastructure operators
- Integrates GIS technologies with an advanced work order management system and Eye in the Skye platform.
- Enables operational optimization through integration and visualization of various data inputs like SCADA with an areal view from the Eye in the Skye platform.
- Integrated Business Management Solution for operations and maintenance, risk management and data transparency.

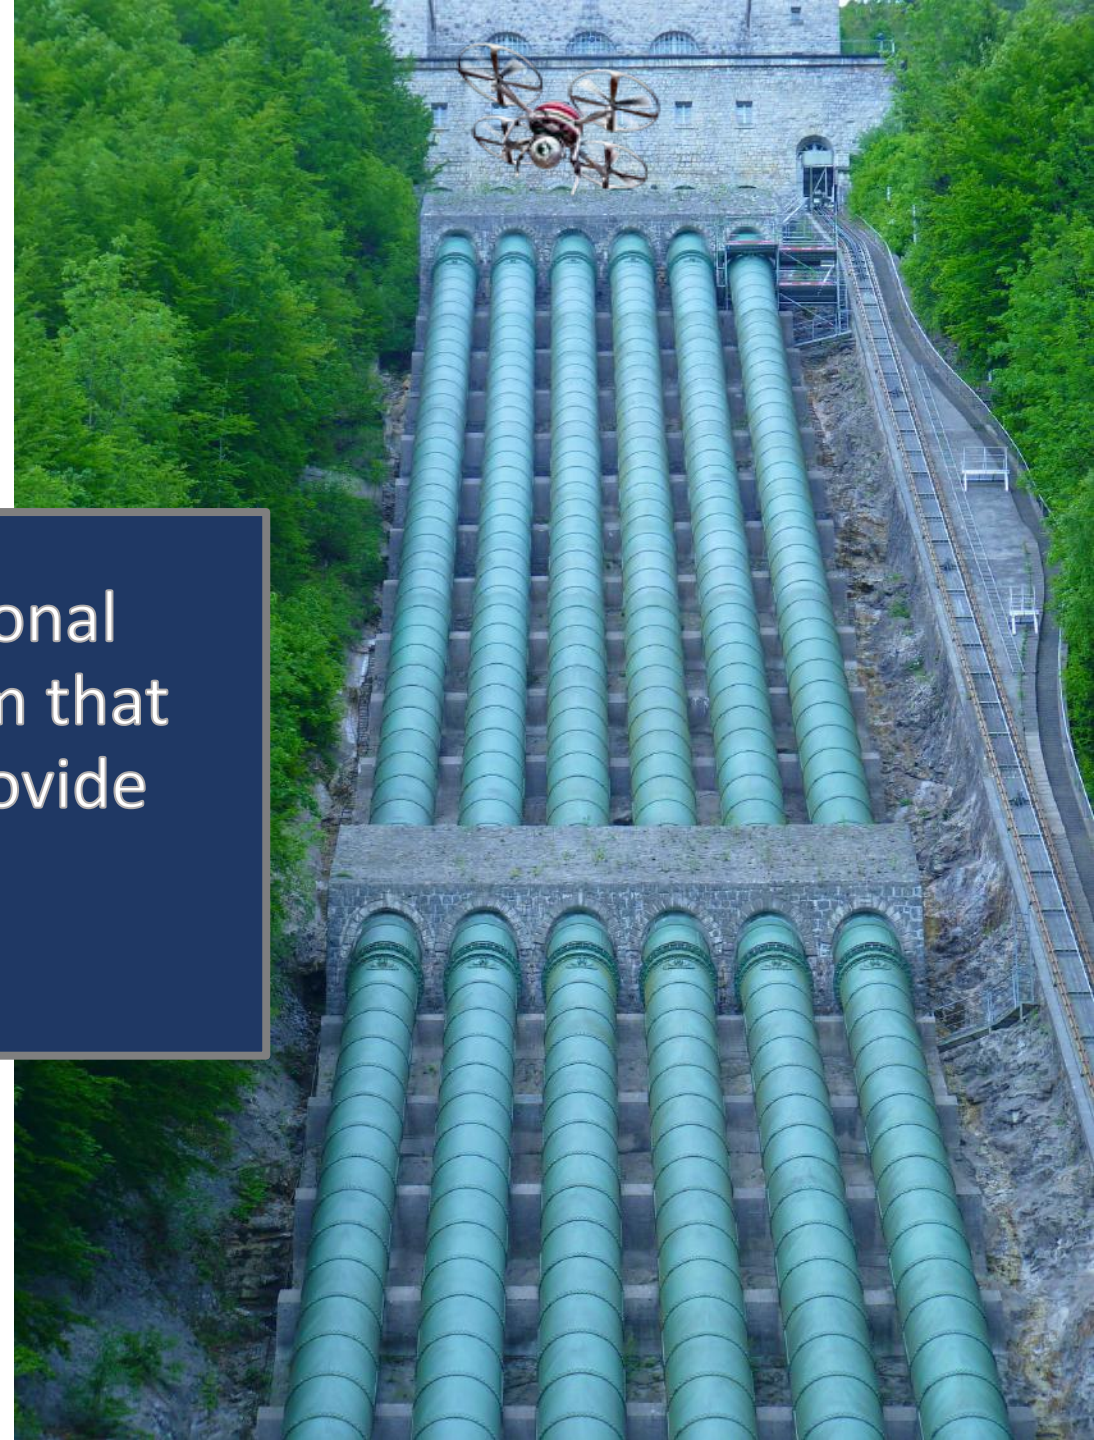

Prevent & detect theft of oil and gas from pipelines

- Detect oil or gas theft from point A to point B
- Correlate pipeline flow and consumption to identify leakage or theft
- Identify location where product is lost
- Provide an alert to control center / dispatch Eye on the Skye flying platform to confirm
- Identify if a new equipment connect to the pipeline
- The system allow tailor made alert actions, based on client need.
- Provide detection of infraction and attached structures not belonging to the line by ongoing correlation of consuming data flow data and site inspection

Who we are

Intus Smartcities Inc. (ISC) is a professional technology services and consulting firm that utilizes proprietary technologies to provide smart city solutions and infrastructure intelligence programs.

What we do

- Damage prevention
- improve safety and resources sustainability
- Reduce maintenance costs
- Expedite construction and development.

How we do it

Intus utilizes proprietary technologies to provide smart solutions and infrastructure intelligence programs

INTUS

smartcities

Not just smart, Smarter!
